Windows, macOS, Linux, Android and iOS

Industry-Specific

Choose from a wide range of verticals and tailor the system for your market and business needs.

Integrated Ecosystem

From tax reporting and processing digital transactions to online distribution, e-invoicing and more.

Global Access

Available in over 30 languages with installations in over 110 countries.

Business Intelligence

Measure progress and profitability in almost every conceivable facet of your business.

The World's Best Integrated Business Platform

Standard ERP for all companies

Standard ERP is a single application for managing all your business processes, whatever your business.

One Application for All Business Processes

Standard ERP is an enterprise resource planning system designed to manage businesses of all sizes in almost any industry. Account management, order processing, inventory, manufacturing and job costing are among the core components, but Standard ERP goes beyond conventional functionality. Choose from a variety of comprehensive, industry-specific modules fully integrated with all other related system functionalities.

Discover a wide range of Customer Relationship Management (CRM) features, such as email, document management, electronic conferencing, graphical calendars and schedulers, all in one application.

HansaWorld employs an unrivaled range of technology giving Standard ERP the versatility to extend throughout an entire company. This capability reduces reliance on costly interfacing between separate third-party applications. Standard ERP is customizable for individual business demands and runs on all major platforms with almost any device.

The Cloud

Businesses looking to cut hardware costs, and save time that would otherwise be dedicated to maintenance and IT, are best served by Standard ERP's award winning cloud hosting choices. Our server partners include IBM and Amazon, which allows for a secure and reliable hosting environment that can be adapted to your specific business needs.

Hosting Standard ERP in the cloud includes a Cloud Node installation, providing the customer complete control over the server hosting their company. Cloud Node opens the doors to quick, efficient, remote hardware management through MyStandard, a personalized portal to server and contract management. Here, automatic backups can be made regularly and downloaded. Start, stop and restart your server on demand, resolve server issues, manage recoveries and routine backups, securely store important files on your own cloud drive and ensure your system is up to date with the latest technology.

Being in complete control with the ability to remotely manage your hosted server significantly reduces cost of ownership. To top it off, HansaWorld's cloud hosting options offer increased flexibility with the ability to install a new Standard ERP client from anywhere in the world, on almost any device with a network connection. This means you can manage your business on the go, in real-time.

Integrated Business Platform

Standard ERP's system architecture reduces the dependence on IT hardware and maintenance, allowing for greater focus on your business instead of the technical infrastructure. As a fully integrated, modular program with verticals for almost any industry, Standard ERP accommodates nearly every department within a small or midsize business.

In a single application, users have an overview of data throughout the business and its operations. Credit controllers, for example, can review commitments made by the sales staff and detect issues with service management that might be delaying payments.

Each department will find tools carefully designed to automate a variety of their respective tasks and routines. The marketing department, another example, can create and design mailshots targeting customers based on past purchases and buying patterns.

Full integration allows the system to run comprehensive reports, pulling data from every aspect of the business where Standard ERP is used. Run Profit and Loss reports, for instance, and Balance Sheets that include committed costs and GRN accruals. Drill down functionality allows users to navigate through the database with precision, whether it's for statistical analysis or a real-time overview of operations.

Standard ERP's consistent interface allows for faster user training than of those businesses using multiple applications built with varied structures.

The Engine

The core of Standard ERP includes your General Ledger, Accounts Receivable and Payable, Sales and Purchase Orders, Invoicing, Business Communicator, Cashbook, Document Manager and the Workflow Overview.

The engine provides tools to run the essentials of a business. Contact your customers and vendors with the Business Communicator, for example, through VoIP or the Skype integration. Each call, inbound and outbound, will generate an activity record to manage contact information and store key points from your conversations, such as agreements, orders, decisions, reminders, etc.

Document management allows you to store and attach files of any format to any record in the system. Organize your files in custom conferences, create libraries of information and determine to which conferences each of your employees has access. Attach images to projects, products and item records, contracts to sales orders, supplier invoices to purchase invoice records, and any other file to its relevant activity.

Organize your tasks and set reminders with business alerts in the task manager and workflow overview. Coordinating projects, tasks and routines with specific activities and records maximizes productivity and provides a live overview.

Standard ERP's graphical calendar is team-oriented, allowing management and staff to review the agendas of their coworkers and keep the team in sync. Each activity type is color-coded to strengthen the planning process and illustrate where employees are spending their time. Multiple calendars can be viewed at once in the Resource Planner for budget comparisons, performance reviews and scheduling purposes.

Assign tasks and activities to employees, assets and machines with the Resource Planner. View reservations for hotel rooms, rentals and training courses, for example, or any other resource you track in the system. The Resource Planner is a powerful tool ensuring you have complete control over the moving parts of your business.

Customer Relationship Management

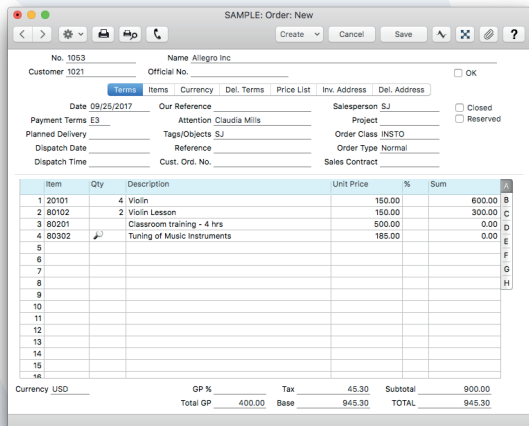

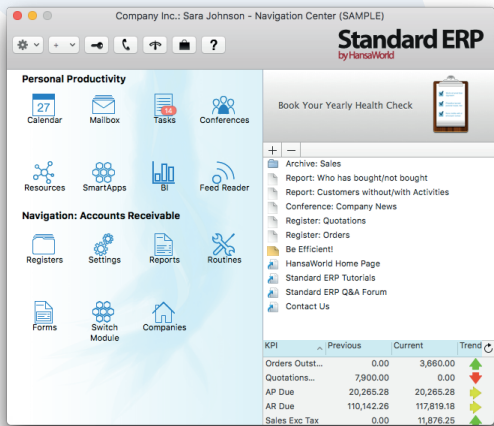

Remind yourself of outstanding tasks by linking the notes of Standard ERP's CRM provides you the tools to track every detail about your contacts while maintaining a full history of communication. Track sales progress and leads to determine their status, source, probability, which salesman is following up and their notes. All data stored in the CRM module can be accessed and used throughout all other relevant components of the system.

Use Standard ERP's integrated workflow to trigger conditional procedures, such as confirmations and approvals, with automated emails, SMS and on-screen messages. Automatically flag activities requiring authorization and alert project managers that the budget has been depleted, or notify a customer when their order has been shipped.

Profile your customers with user-definable classifications, such as marketing sources and buying patterns. This information can be used to quickly create effective sales campaigns with Standard ERP's communication tools.

Efficient Implementation

Implementing the engine of Standard ERP, when compared to competitors, is a quick process with an average of one day per user. Depending on the demands, only one or two consultants are needed for implementation, instead of the industry norm of three to five.

Standard ERP for your company

Standard ERP has in-depth functionality for the vast majority of companies - as shown by the examples below.

Distribution

- From Quotation to Invoice in under a minute
- Size, colour and unit handling
- Dimensions, packaging and supply chain management

Company Profile

HansaWorld is a leading software house providing a full suite of Enterprise Resource Planning and Customer Relationship Management products that delivers the flexibility required by today's businesses.

The group employs more than 300 staff with a strong network of subsidiary companies and distribution partners on all continents. This network enables us to offer international implementation in over 30 languages with country specific localizations. The products are easy to use and available on all smartphones, tablets and desktops including Mac, iPhone and iPad.

HansaWorld continually invests in Research and Development to provide innovative and future proof products to our customers.

As recognized innovators for over 25 years, HansaWorld shows continued technological leadership in the international business software industry.

More than 550,000 companies trust us with their business critical information.

Product Strategy

Standard ERP's advanced and successful user interface was first developed for Apple Macintosh in 1988. In 1994, when the program was ported to Windows, it had already been proved by thousands of users. HansaWorld's experience with international sales and modern technology puts it in the perfect position to meet the challenges of the next decade.

HansaWorld provides a wide range of technologies for e-business including internal and external email, several webshop solutions and full clients for all major tablets. In addition, HansaWorld can help to build a corporate portal. Standard ERP is developed using C++ as its programming language, and proprietary technology for database design and for network communication. This allows HansaWorld to have the same products available for several different operating systems, each version optimised for maximum performance.

Currently Standard ERP is available for Windows including Windows CE devices up to Windows 8 tablets, Mac OS X, all iOS devices (iPod Touch through to iPad), Linux and AIX, all browsers, and Google Android.

Windows XP, Windows CE and Windows 8 are registered trademarks of Microsoft Corporation. Apple Macintosh, Mac OS and OS X, iOS, iPod Touch and iPad are registered trademarks of Apple Computer Inc. AIX is a registered trademark of IBM Corporation. Google Android is a registered trademark of Google Inc. Copyright HansaWorld Ltd.
